

SERVICE OVERVIEW

Data API

Programmatic access to our international repository of corporate sustainability and ESG disclosures. Query the catalogue, pull structured metadata, and retrieve report PDFs directly into your systems.

What You Get

- **Structured metadata:** company and report fields returned as JSON
- **Report PDFs:** retrieved on demand through short-lived pre-signed links
- **A queryable catalogue:** filter by company, framework, year, language, country, and sector
- **Integration-ready:** cursor pagination, incremental sync, and a downloadable OpenAPI 3.1 specification

Bring the reports and metadata within your agreed coverage into your own systems.

Authentication & Environments

Authentication is by API key, sent on every request:

```
Authorization: Bearer srk_live_XXXXXXXXXXXXXXXXXXXX
```

Keys are issued per client, carry defined scopes, and are rate-limited. All requests run over TLS against a single base URL:

```
https://api.sustainabilityreports.com/api/v2
```

Interactive documentation (Swagger) and the OpenAPI 3.1 specification are available at `/api/v2/docs`, so your team can generate client code and start a test integration quickly.

Endpoints

Endpoint	Purpose
GET /reports	Query reports, filterable and paginated
GET /reports/{id}	Full metadata for one report
GET /reports/{id}/download	A pre-signed URL for the report PDF
POST /companies/resolve	Resolve tickers or ISINs to company keys
GET /entitlements	Your access scope
GET /meta/usage	Your request and download activity

Metadata & Field Definitions

The API returns structured company and report metadata. Use the API specification supplied at onboarding for the exact JSON field names and types.

Schema V3 file exports have 50 columns, documented in the [Metadata Field Guide](#). The API response and a file export are different formats; confirm the fields your integration needs during onboarding.

Metadata covers report identity, company identity, reporting periods, standards, materiality and assurance. Cover year and fiscal year are distinct. Sector and industry use SRIC. Identifiers and dates may be blank where unavailable, and a blank boolean must not be treated as FALSE. US and Canadian ISINs are withheld.

Filtering & Search

Query the catalogue by company (stock ticker, ISIN, or company key), reporting framework (GRI, SASB, TCFD, ISSB, ESRS/CSRD, CDP, UNGC, SBTi), report year, language, country, and sector. Company resolution maps supported identifiers to company keys. Review unresolved or ambiguous entries during onboarding.

File Retrieval

Report PDFs are served through short-lived pre-signed URLs, the same pattern as a pre-signed S3 link:

1. Request a download link: GET /reports/{id}/download
2. Stream the PDF from the returned URL

The link is valid for a few minutes and authorizes a single file, giving your systems direct, fast download throughput.

Access & Subscriptions

Your agreement defines coverage, reporting periods, formats, usage limits and permitted uses. Newly published reports within that scope can be retrieved through the API. Use scheduled polling and incremental queries to collect updates; onboarding confirms your access and refresh workflow.

Built for Integration

- **Cursor pagination** for efficient ingestion of large result sets
- **Incremental sync** via an `updated_since` parameter, so you pull only what is new
- **Report and company identifiers** to support matching and deduplication
- **OpenAPI 3.1 specification** and Swagger UI for fast onboarding

Getting Started

1. Tell us which companies and reporting periods you need.
2. We provision your access and issue your API key.
3. Integrate using the OpenAPI specification and example client we provide.

For access and pricing tailored to your coverage, fill out the request form at sustainabilityreports.com/services or email us directly.

Why SustainabilityReports.com?

- **A continuously updated report library.** Sustainability and ESG disclosures from companies worldwide
- **International coverage.** Companies across countries, sectors, and stock exchanges. See [current coverage](#) for the latest figures
- **Research-grade data**, used in academic publications including Nature Climate Change
- **Impact-driven**, founded by researchers at Rotterdam School of Management, Erasmus University. Our premium services keep the platform open and ad-free for everyone
